

Metro Hospital - Mobile App

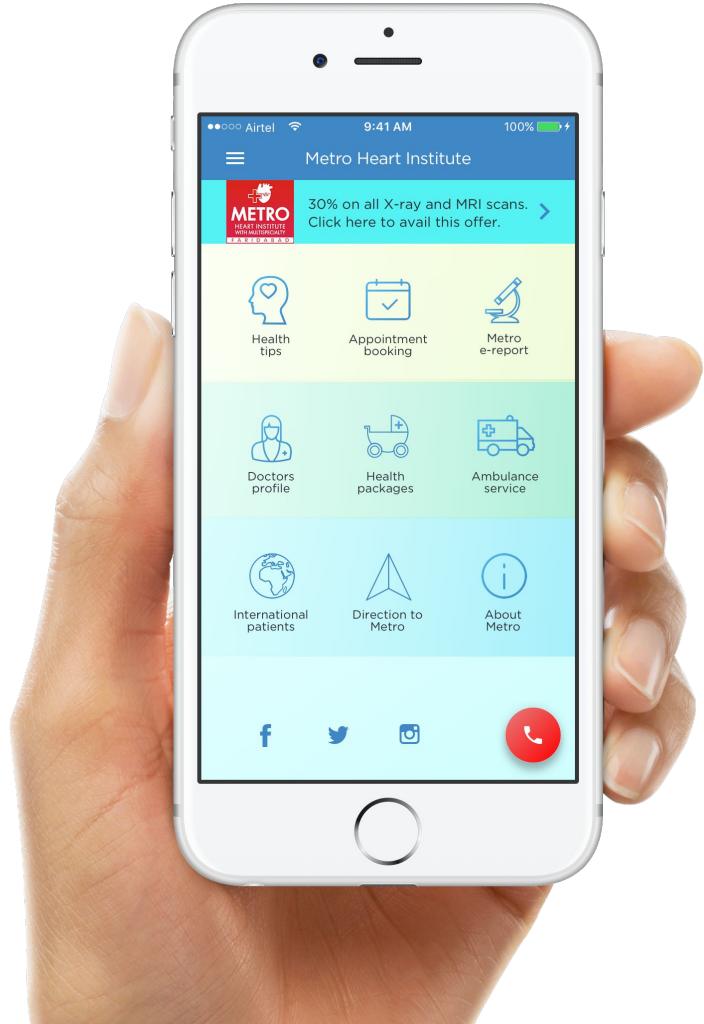

vikas@abacusdesk.co.in

Metro app - main features

1. Health tips
2. Appointment booking
3. e-Reports
4. Doctor profiles
5. Metro health packages
6. Ambulance services
7. International patients
8. Maps and directions
9. About Metro and social media pages
10. Emergency call

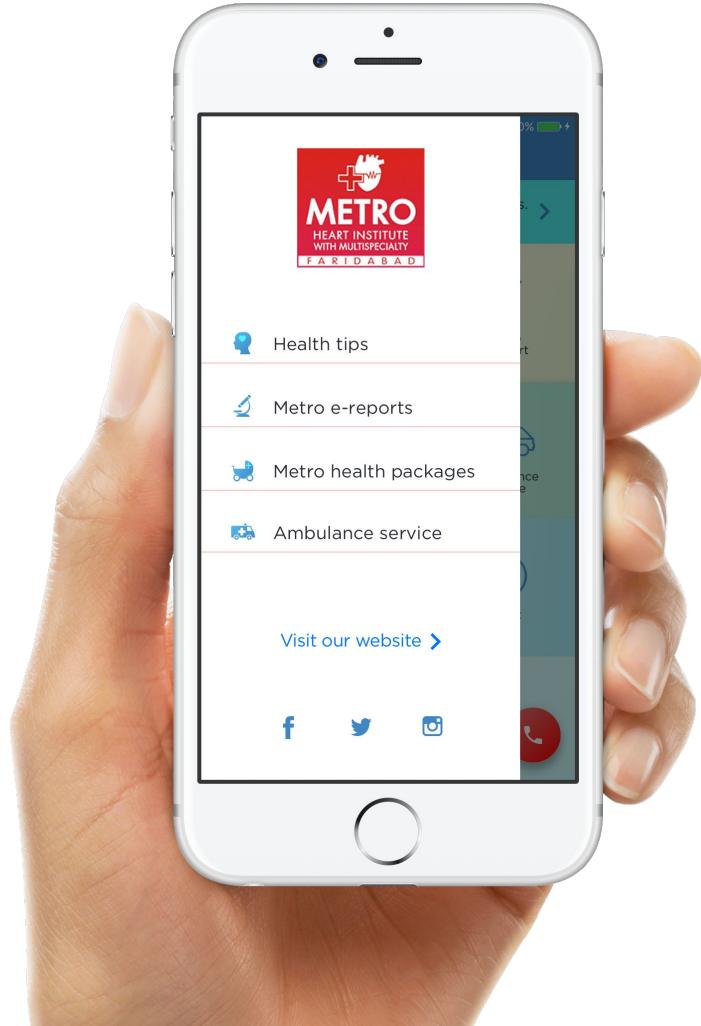

Home screen provides with hot-links to the most important features of the app for quick access.

Home screen also features banner-ad type notifications on the top for latest product and discount announcements.

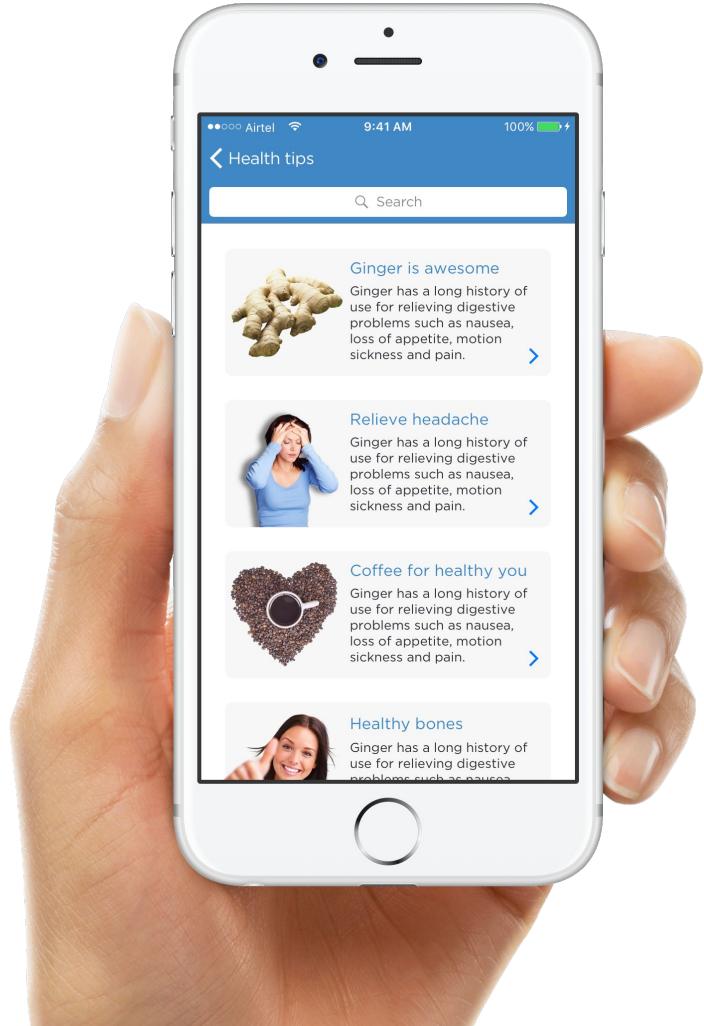

Below on the screen, there are social media button to go to Metro Hospital's social pages, and an emergency call button.

When you click on the top-left hamburger menu icon, you can access the main menu.

This include Health tips, e-Reports, Health packages and Ambulance service.

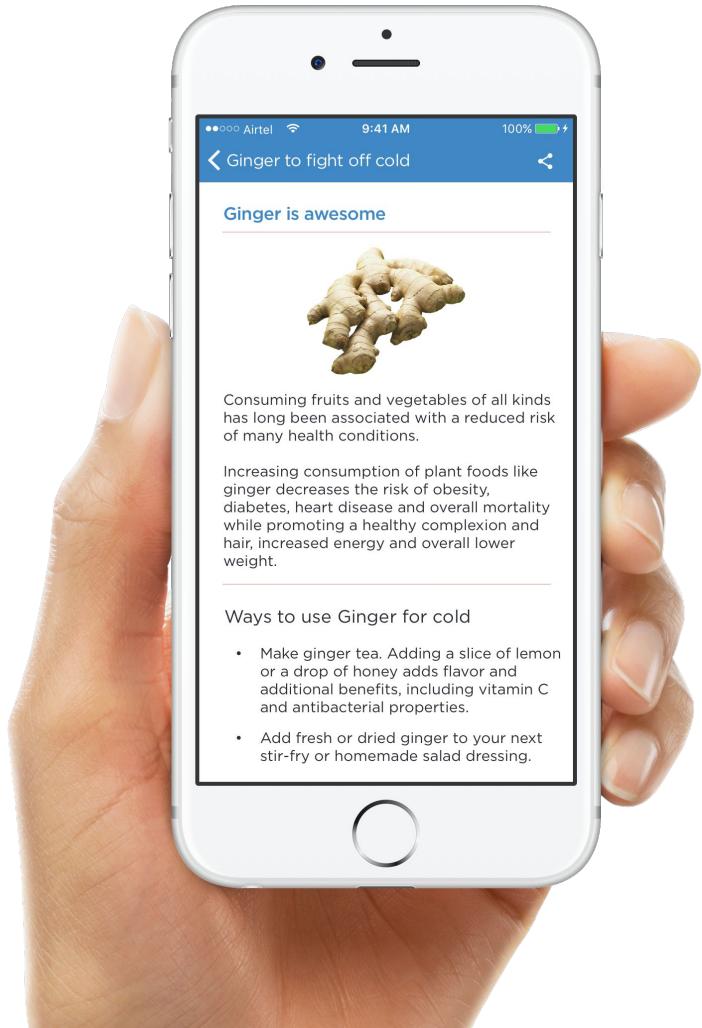

There's also a link to website and popular social media pages.

Health tips is a section dedicated to health tips related to common disorders and seasonal ailments.

We can integrate this section with Metro's blog or there will be a back-end CMS to manage the content.

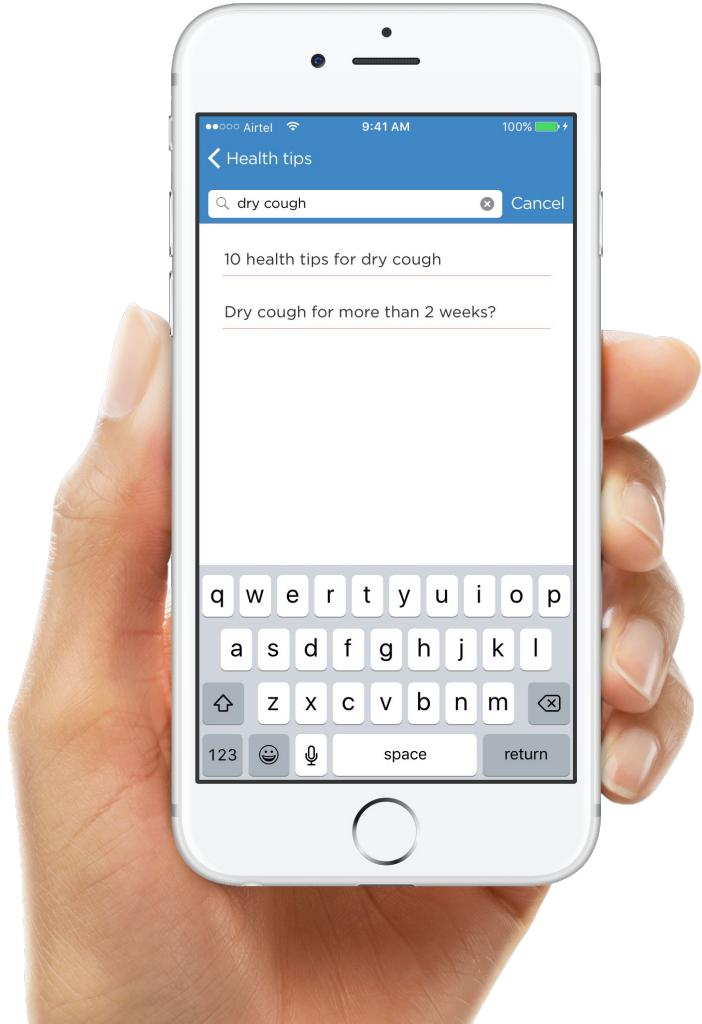

Health tips is a very important section for any healthcare organization and has the power to outreach to previously unknown audience.

When you click on any article in the Health tips section, you will be taken to its reading page.

Here we can provide further useful health information like graphics, video and interactive media.

Users can also share the articles via top-right share button, thus spreading awareness about Metro Hospital.

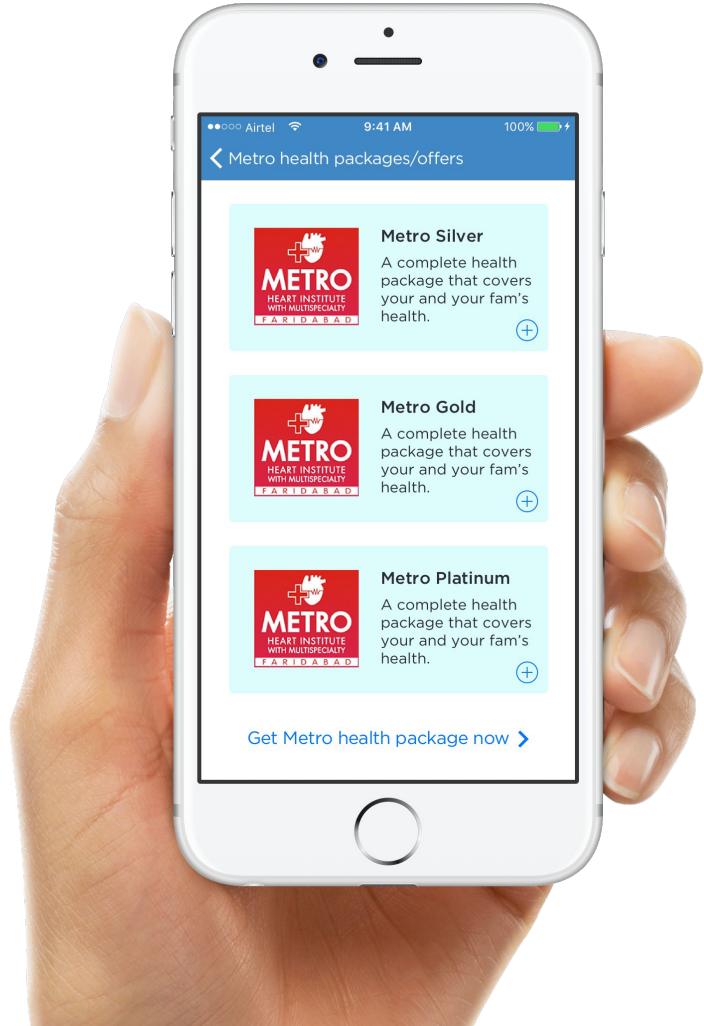

User can also search for keywords related to what they are looking for.

This way they can have their most needed information without scrolling down to that specific article.

It's well-known that people mostly search about medical information when they have such need.

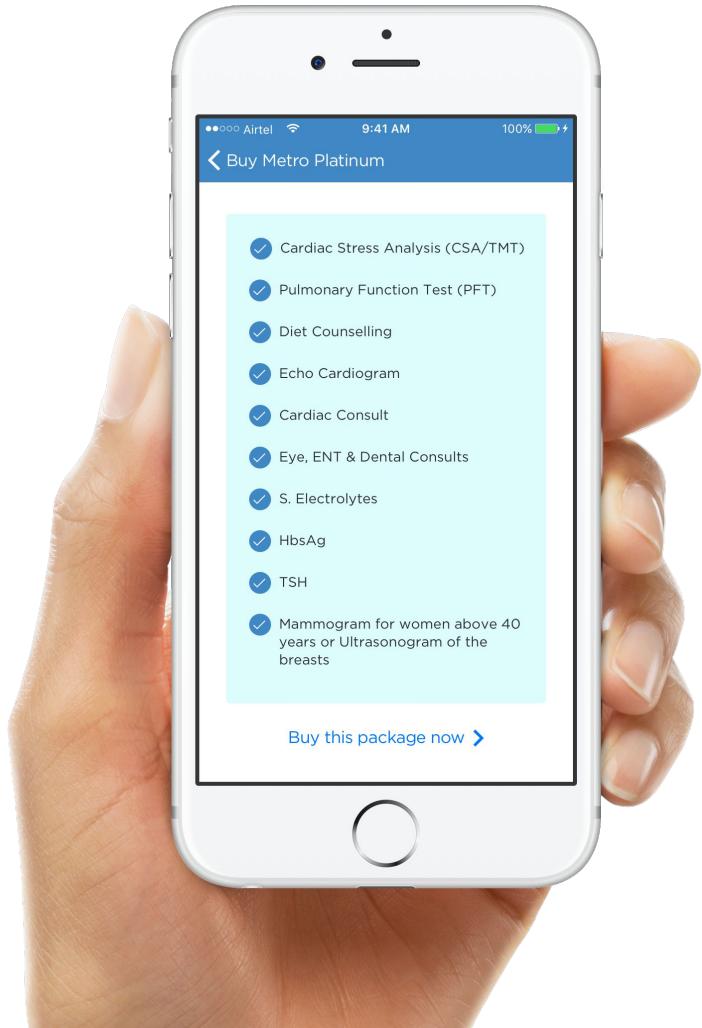

That's why we have integrated the search functionality in Health tips.

Metro health packages section will provide the user with all the health packages available via Metro.

Here users can browse through different packages and make a quick inquiry which will then be mailed to your related email account.

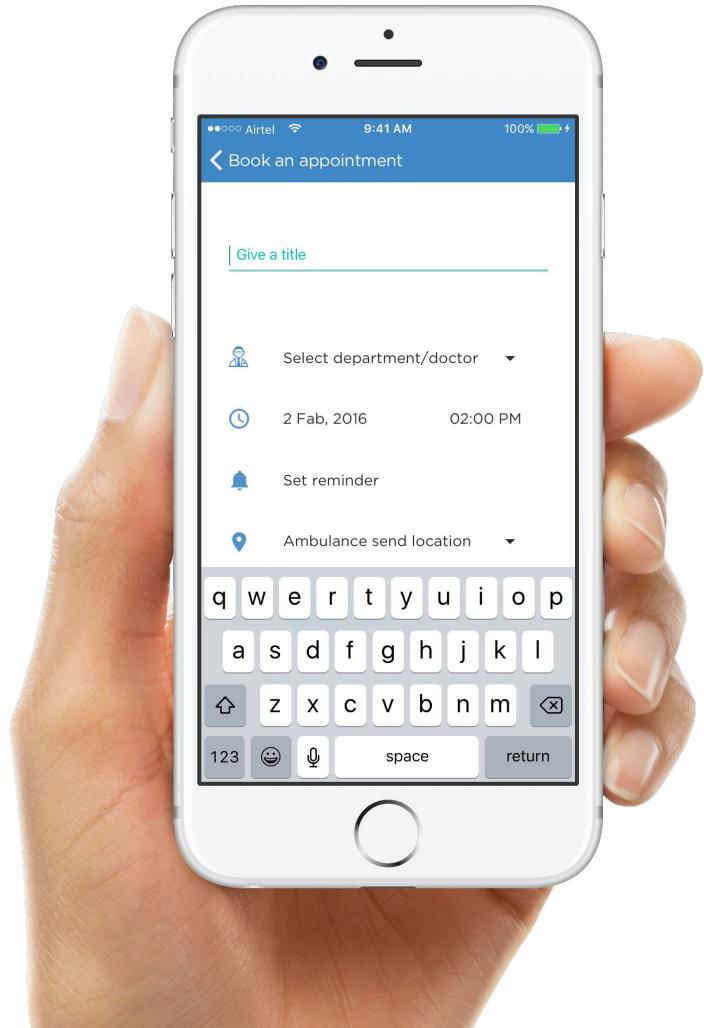

There's also an option to go to Health packages page on your website.

For example, when you click on the Metro Platinum packages from the menu, you will be taken to its own page.

Here you can see all the different services covered under this specific package.

If the user is happy with the package, he can make a direct inquiry by clicking the button on bottom.

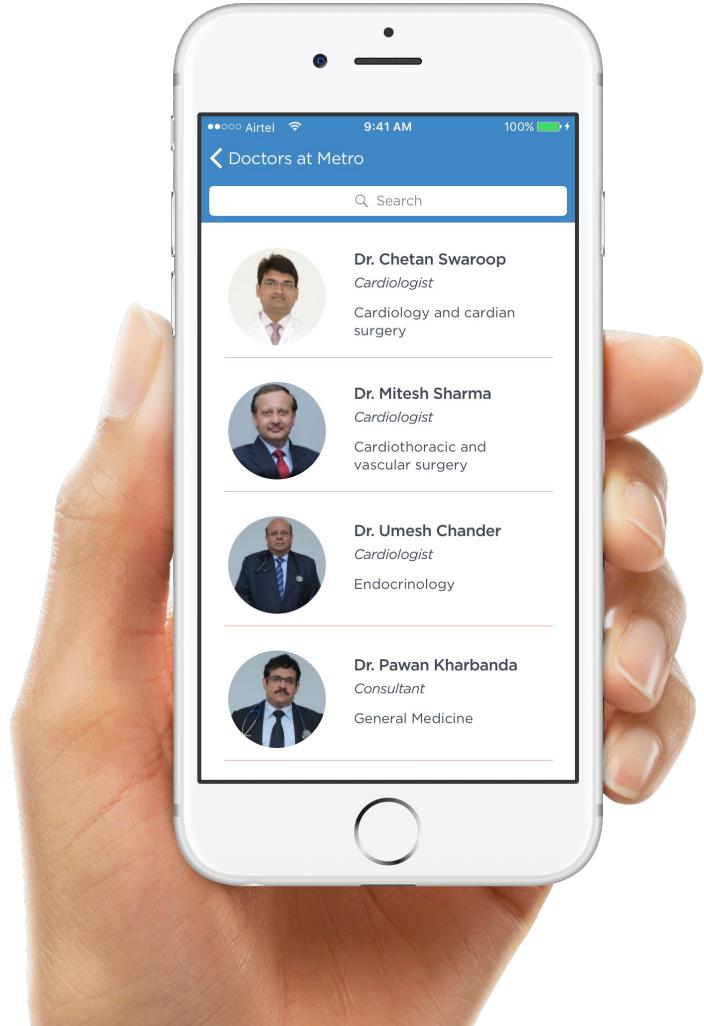

With “Book an appointment” feature, user can request to book an appointment with you.

User can choose the doctor or the department he wants to visit, time and date of the visit.

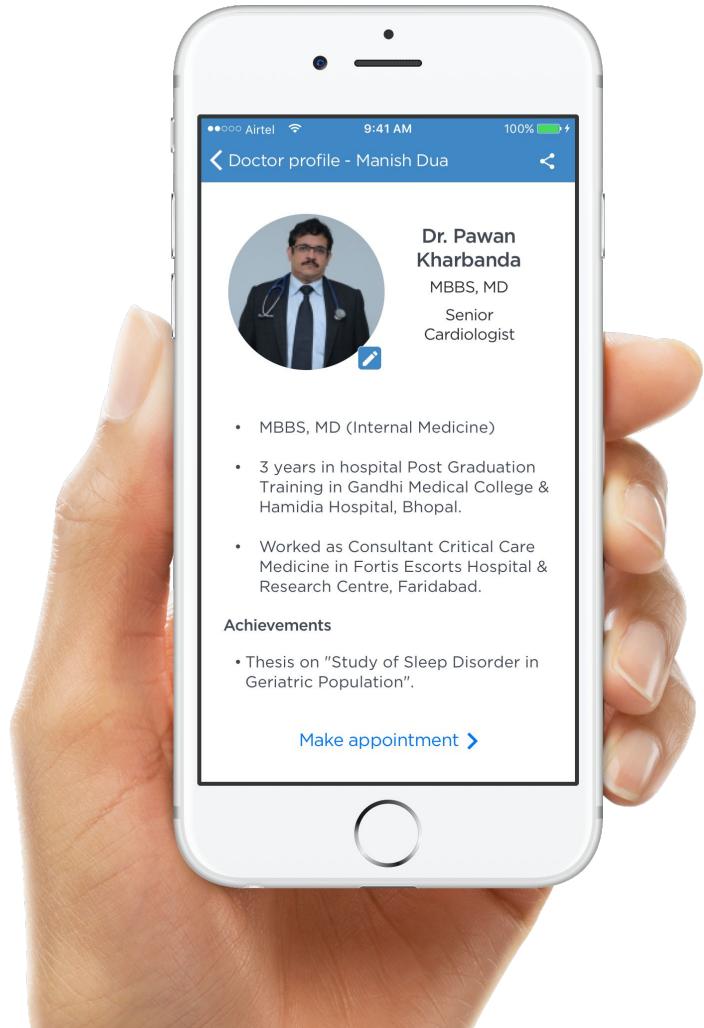

We have also added a “reminder” functionality for user convenience.

Ambulance feature is also there in case the patient needs one.

“Doctor Profile” provide the user with a complete list of doctors, surgeons and other important health professionals.

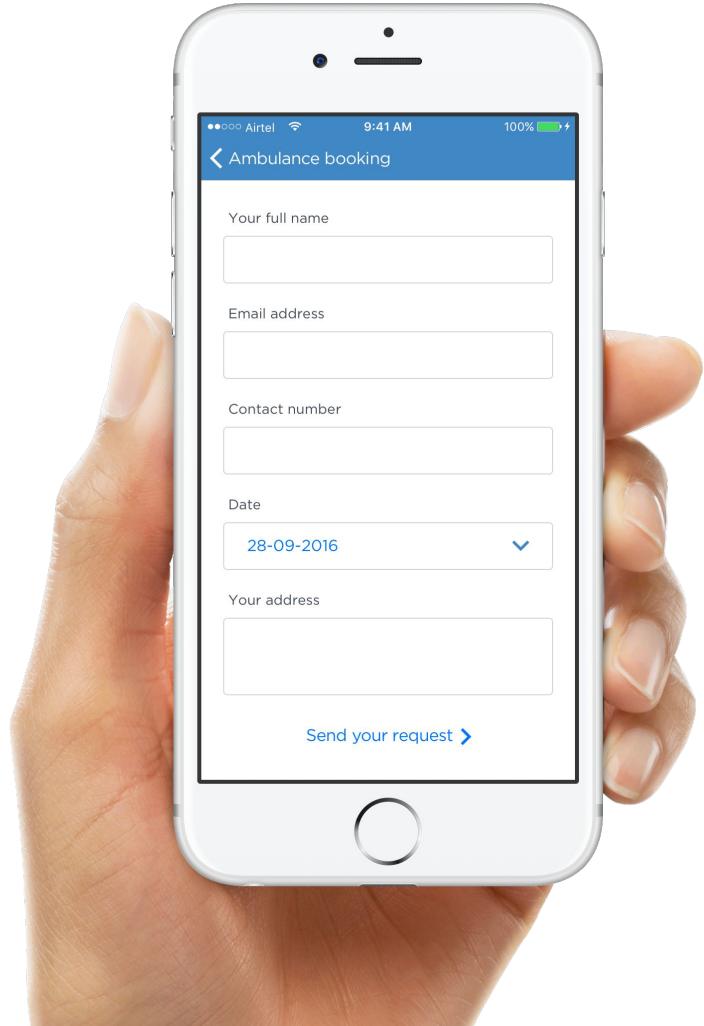

With this feature, the user can know more about doctors, their background, specialty and other important information.

For example, when someone clicks on Dr. Pawan Kharbanda's profile, he will be taken to doctor's personal page.

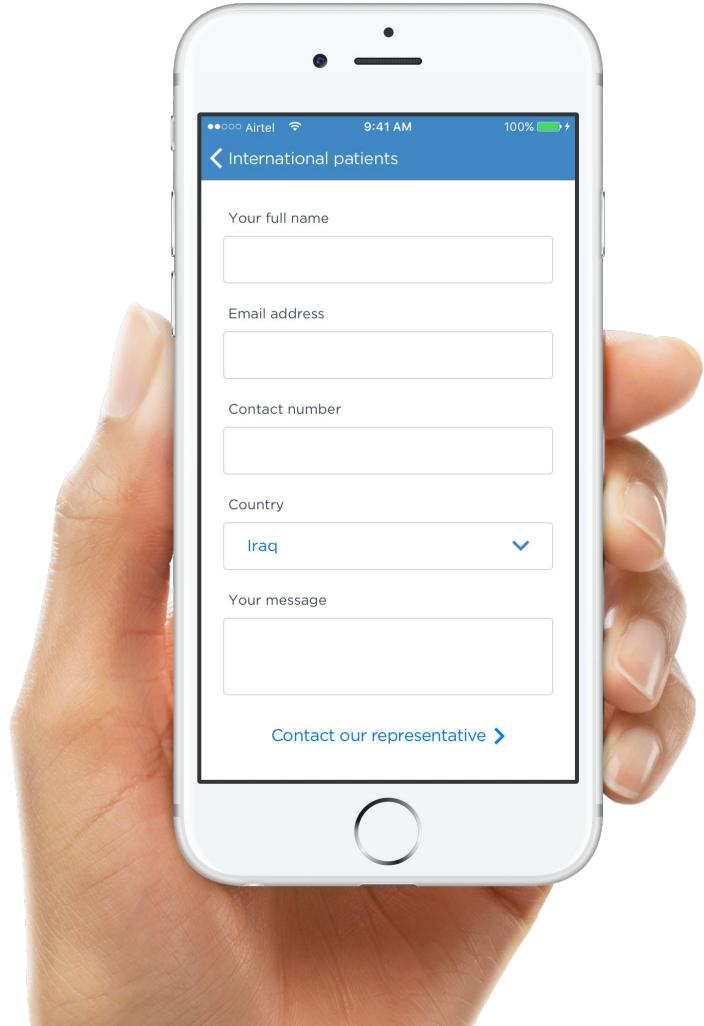

Here, as you can see, is all the information related to Dr. Pawan.

For user friendliness, we have also provided a “Make appointment” button in case user wants to directly request for an appointment with Dr. Pawan.

“Ambulance booking” feature will take the user to the booking form where he can fill out all the relevant information in order to book an ambulance.

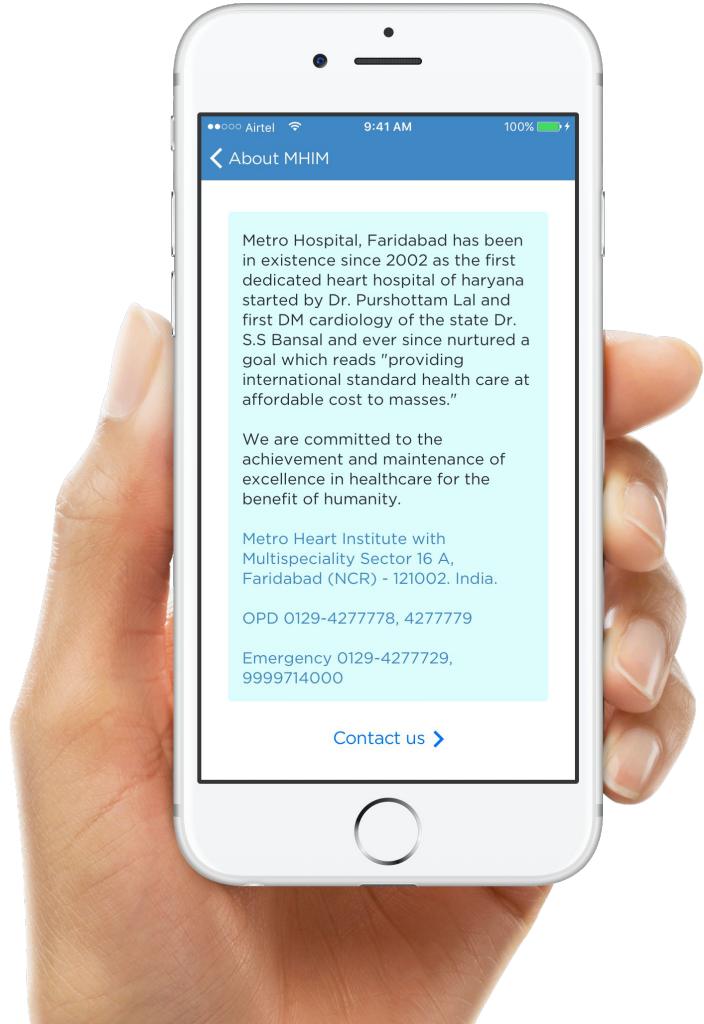

There all inquiries can be sent to a database in the back-end or to an email account, whatever preferred.

"International patients" feature is specifically for patients outside India.

With this form they can submit their contact information and let a Metro representative contact them.

The difference between this type of inquiry and other general inquiries is that, international patient queries can be set to being the most important ones on the backend side and will require an immediate response.

“About Metro” features provides the users with an overview of Metro Hospital with contact information.

On scroll, the user will also see hospital’s location on Google maps and there will also be a video down below which is currently not visible due to screen limitation here.

Thank you
